ABC Technologies

Business Operations Handbook

10-page fictional business document for the Multi-PDF RAG assignment

Purpose

Use this handbook to test PDF ingestion, chunking, embeddings, retrieval, question answering, and source citations in a LangChain + Streamlit application.

Important

All company details, targets, prices, and policy examples are fictional. The document is for software testing only.

1. Company Overview

About the company

ABC Technologies Pvt. Ltd. is a fictional mid-sized business technology provider. It helps small and medium-sized businesses improve sales operations, customer service, reporting, and workflow automation.

Mission

To make business processes simpler, measurable, and more reliable through practical technology and customer-focused service.

Business objectives

The company aims to grow recurring revenue, improve customer satisfaction, reduce repetitive manual work, and protect customer information.

Operating principles

Employees should communicate clearly, document important decisions, protect confidential information, and use data to support business decisions.

Example company facts

Founded: 2018. Employees: 120. Main office: Chennai, India. Customers: 450 business accounts. These details are fictional and are included only for RAG testing.

2. Products and Services

Core services

ABC Technologies offers CRM implementation, marketing automation, business intelligence dashboards, workflow automation, and customer support process consulting.

CRM implementation

The CRM team maps customer journeys, configures fields and workflows, imports approved data, tests integrations, and trains users.

Marketing automation

The marketing team builds email journeys, lead scoring, audience segmentation, and campaign performance reports.

Business intelligence

The analytics team creates dashboards for revenue, lead conversion, campaign engagement, customer retention, and service performance.

Illustrative pricing

CRM setup package: ■2,50,000. Marketing automation package: ■1,20,000 per month. Analytics dashboard project: ■1,75,000. Prices are fictional and exclude taxes.

3. Sales Targets and Revenue

Annual target

The fictional annual revenue target for the current financial year is ■12 crore.

Quarterly allocation

The illustrative quarterly targets are Q1 ■2.5 crore, Q2 ■2.8 crore, Q3 ■3.0 crore, and Q4 ■3.7 crore.

Sales qualification

A qualified opportunity should have a confirmed business need, a known decision-maker, an estimated budget, and an agreed next step.

Pipeline review

Sales managers review pipeline value, deal stage, expected close date, probability, and next action every Monday.

Performance indicators

Key indicators include new qualified opportunities, proposal-to-win rate, average deal size, sales-cycle length, and forecast accuracy.

Example target conflict

This handbook lists the annual target as ■12 crore. A separate fictional sales memo may list ■11.5 crore. If both are uploaded, the RAG app should report the discrepancy rather than silently choosing one.

4. Marketing and Lead Generation

Marketing objective

Marketing generates relevant demand, educates prospects, and supports sales with qualified leads and useful campaign insights.

Channels

Approved channels include email, webinars, the company website, partner campaigns, search content, and professional social media.

Lead definition

A marketing-qualified lead (MQL) meets the agreed fit and engagement criteria. A sales-qualified lead (SQL) has been reviewed by sales and has a credible potential project.

Campaign process

Each campaign should have a documented objective, target audience, approved message, consent basis, launch date, owner, and measurement plan.

Illustrative conversion targets

The sample quarterly targets are 500 new leads, 100 MQLs, 40 SQLs, and 10 closed deals. These are examples, not industry benchmarks.

Reporting

Campaign reports should show delivered emails, clicks, registrations, attendance, lead quality, influenced pipeline, and follow-up actions.

5. Customer Support and SLAs

Support hours

Standard support is available Monday to Friday, 9:00 AM to 6:00 PM India Standard Time, excluding company holidays.

Priority definitions

P1 means a critical outage affecting many users; P2 means a major feature is unavailable; P3 means a limited issue with a workaround; P4 means a question or minor request.

Initial response targets

Illustrative targets: P1 within 1 business hour, P2 within 4 business hours, P3 within 1 business day, and P4 within 2 business days.

Resolution expectations

Response targets are not guaranteed resolution times. The support owner must communicate progress, dependencies, and revised estimates.

Escalation

P1 incidents should be escalated immediately to the support manager and technical lead. Customer updates should be recorded in the ticket.

Customer feedback

Support reviews customer satisfaction scores and recurring issues monthly and creates improvement actions for the most common problems.

6. Human Resources and Onboarding

Working arrangements

Employees follow the work arrangement stated in their employment agreement and team policy. Managers should communicate schedule changes in advance.

New-joiner onboarding

The onboarding checklist includes identity and payroll paperwork, security training, account provisioning, team introductions, role objectives, and a 30-day check-in.

Leave policy example

For this fictional handbook, eligible new joiners receive 12 days of annual leave during their first year, subject to applicable law and the company's formal HR policy.

Leave approval

Employees should submit planned leave through the approved HR system and wait for manager approval before making non-refundable work-related arrangements.

Performance reviews

Managers and employees review objectives quarterly. Feedback should be specific, fair, documented, and connected to role expectations.

Policy conflict test

This handbook says 12 annual leave days for first-year employees. If another uploaded policy says 15 days, the app should cite both documents and flag that the policies disagree.

7. Finance and Expenses

Purchase approvals

Employees must obtain approval before committing company funds. The approver depends on the amount and category in the current finance policy.

Expense claims

Claims should include the business purpose, date, amount, category, and itemized receipt where required.

Illustrative limits

For testing, ordinary employee expenses up to ■5,000 require manager approval; expenses above ■5,000 require department-head approval. These limits are fictional.

Vendor payments

Finance verifies vendor details, purchase approvals, invoice accuracy, and receipt of goods or services before processing payment.

Revenue reporting

Monthly revenue reports should distinguish invoiced revenue, recognized revenue, collected cash, and outstanding receivables.

Audit trail

Approvals and corrections should be recorded in the designated finance system. Employees must not alter records to conceal an error.

8. Technology, CRM, and Automation

Approved systems

The fictional company uses a CRM, marketing automation platform, help-desk system, document repository, and business intelligence tool.

CRM data quality

Customer records should have an owner, valid business contact details, a lifecycle stage, and a documented source where available.

Automation controls

Automated workflows should be tested in a safe environment, reviewed by an owner, and monitored after deployment.

Access management

Access should follow least-privilege principles. Users should receive only the permissions required for their work.

Change management

Material workflow changes need a change record, test evidence, an approver, a release window, and a rollback plan.

Reporting definitions

Teams should agree on metric definitions before comparing dashboards. For example, a lead count should state whether duplicates and disqualified leads are included.

9. Data Security and Document Management

Confidential information

Customer records, credentials, contracts, employee information, and non-public financial data must be handled as confidential.

Credential security

Passwords and API keys must not be committed to source control, pasted into public tickets, or included in screenshots shared externally.

Document naming

Use clear names that include subject, date or version, and status. Store approved documents in the official repository.

Retention and deletion

Retain business records according to the approved retention schedule and legal requirements. Do not delete records to avoid an audit or investigation.

Incident reporting

Suspected unauthorized access, data loss, or accidental disclosure must be reported promptly through the approved security channel.

AI and document review

AI-generated summaries must be checked against source documents before being used for contractual, financial, HR, or compliance decisions.

10. KPIs, Roadmap, and FAQ

Core KPIs

Leadership reviews recurring revenue, sales win rate, qualified pipeline, campaign-to-opportunity conversion, customer satisfaction, ticket response performance, and automation failure rate.

Illustrative roadmap

Quarter 1: standardize CRM fields. Quarter 2: improve campaign attribution. Quarter 3: automate monthly reporting. Quarter 4: review customer retention and service quality.

FAQ: What is the annual revenue target?

The fictional target in this handbook is ■12 crore. Check for conflicting documents before treating this as the current target.

FAQ: How many annual leave days do new joiners receive?

This handbook states 12 days in the first year. Check the official HR policy and identify any conflicting source.

FAQ: When are sales pipeline reviews held?

Sales pipeline reviews are scheduled every Monday.

FAQ: What is the standard support window?

Monday to Friday, 9:00 AM to 6:00 PM India Standard Time, excluding company holidays.

Important notice

This is fictional training material created for a RAG assignment. It is not legal, HR, financial, or operational advice and should not be treated as a real company's policy.
